

Environment and Climate Change

The Programme contributes to funding research and development projects selected on a competitive basis in the following areas: Environmental technologies, Climate Change and Energy Efficiency and Renewable Energies. The Programme supports measures related to hydroelectric, solar, wind and marine energy sectors.

Objectives:

- To increase development and application of technology that benefits the environment.
- To promote Enterprise Research, Development and Innovation in Spain in the Climate Change and Renewable Energy sector.
- To enhance economy efficiency in the European Community for reaching the optimum level of R&D&i.
- To strengthen bilateral relationships between Spanish and Donor States entities.

Outcomes:

- To increase the number of enterprises producing innovation in the targeted sectors in Spain.
- To increase knowledge transfer from universities and research institutions to innovative enterprises in the targeted sectors.

Programme Operator: Center for Technical Industrial Development (CDTI)

Donor Programme Partner: Innovation Norway

Programme Grant: 18,2 million
